

Minecraft Server Tool

How to create a server

----- Step 1 -----

Either:

- Press the “[Create New Server](#)” button
- Select a file with the “[Select/drop .jar](#)” option (you can also drop a .jar file directly onto the panel from file explorer)

----- Step 2 -----

[Create New Server](#)

1. Make sure the “Server” tab is selected
2. Create a name for your server*
3. Select a version for your server
4. Press “Create”

[Select/drop .jar](#)

1. Create a name for your server*
2. Press “Create”

NOTE: Server names can only include letters, numbers and spaces

----- Step 3 -----

If you selected [Create New Server](#) and you don't select the latest version or 1.8 then the server file has to be downloaded from the internet.

Actions the Minecraft Server Tool is doing:

- Downloading the .jar and the official Minecraft Server Tool plugin
- Creating a folder in the Servers folder
- Creating a file to store data about the server (server.json)
- Creating the startup script (server.bat)
- Starting the server

The last step is accepting the EULA. Once you do that the server will be created and ready for use!
